PROFILE

Technical Product Manager with 5+ years building data-driven platforms and scalable systems, specializing in system design, B2B data and analytics solutions and cross-functional delivery from architecture to production in an agile and fintech environment

Program Delivery: Dependency and Escalation Management, Stakeholder Alignment; Sprint, PI, Roadmap & Capacity Planning; Go-to-Market Execution, Release Management, Cross-Functional Coordination, UAT, KPI/OKRs Definition & Tracking

Technical: ETL Pipelines, Event-Driven Systems, REST APIs, Python, SQL, BigQuery, System Design, MongoDB, A/B Testing

PROFESSIONAL EXPERIENCE

CIBC US

Chicago, USA

Data, AI & Analytics Intern, Risk Management

Jan 2026 – April 2026

- Engineered a robust, production-ready private wealth data processing pipeline in Python with automated error handling and modular architecture replacing manual Excel workflows and saving 350+ hours of analysis time
- Developed ML-based churn-risk model for 10K private wealth households and flagging 41 high-risk clients with churn probabilities exceeding 50% , and enabling RMs to prioritize targeted retention outreach through predictive modelling

S&P Global Market Intelligence

New Delhi, India

Product Manager – Analytics & Engineering

Aug 2022 – Aug 2025

- Owned delivery of two concurrent engineering and analytics workstreams across 14 members spanning cloud and on-premise environments; evangelized roadmaps, managed sprint, PI planning & release coordination, tracked cross-functional dependency across engineering, QA, and business stakeholders and balanced trade-offs
- Launched end-to-end delivery of 6M+ Ratings document integration; navigated governance constraints and delivered a Tableau report enabling Ratings team to derive content strategy direction from MI platform data for the first time
- Redesigned usage instrumentation from a reactive manual process to a source-level automated model; drove 20% reduction in BAU and delivered complete usage visibility to executive leadership, closing a 33% classification data gap
- Identified AI-driven bot inflation skewing platform usage metrics; defined detection thresholds and filtering logic, led cross-functional implementation with engineering, restored clean data integrity across 7+ downstream reporting teams
- Designed and shipped automated ETL validation pipeline in Python; replaced manual QA workflow of page-by-page ID entry into analytics tool, enabling bulk data loads and reducing manual QA effort by 70%
- Built and presented executive business case for third-party analytics integration - Heap tool; led requirements definition vendor coordination, legal and compliance integrations; increasing engagement by 13% within three months

Associate Product Manager – Analytics

Feb 2022 – Aug 2022

- Built real-time OLAP-backed Tableau and Power BI dashboards from cross-platform SaaS usage data; insights directly shaped go-to-market (GTM) decisions and contributed to a 4% client conversion increase in the following quarter
- Authored PRDs, user stories, drove backlog prioritization, prepared wireframes and coordinated releases across Agile sprints, enabling end-to-end delivery from requirements to launch and aligning cross-team across multiple workstreams

Product Analyst & UAT Lead

Mar 2021 – Feb 2022

- Owned UAT and end-to-end delivery of 3+ major product releases as primary SME; drove alignment between business and engineering from requirements through launch, resolving scope conflicts and ensuring on-time quality delivery
- Identified recurring pain points in client data ingestion workflows via user research and segmentation, drove UI/UX improvements and process optimizations, reducing escalation frequency and resolution time by 10%

Research Associate

June 2018 – Feb 2021

- Led Lean and RPA initiative; prototyped ML-powered internal training chatbot, defined scaling strategy, and drove org-wide adoption, reducing manual training effort by 75%

ACADEMIC PROJECTS

- Architected and built an end-to-end Ticketmaster-style booking app with ~10 REST APIs, enabling concurrent booking with TTL-based locking, and queue-based traffic control; integrated services to simulate real-world distributed system ([Link](#))
- Built an AI pipeline that transforms unstructured data into structured investment memos with a 7-pillar scorecard and verified-facts guardrails. Owned full technical scope from API pipeline architecture to LLM integration and deployment, cutting research time from 5 hours to under 60 seconds ([Link](#))
- Fine-tuned an LLM using DPO on a custom preference dataset to align outputs toward task-specific intent, improving response consistency and reducing irrelevant or misaligned generations across evaluated prompts ([Link](#))

EDUCATION

Purdue University (*MS-Business Analytics & Information Management*)

West Lafayette, USA, May 2026

Guru Gobind Singh Indraprastha University (*MA in Economics*)

Delhi, India, July 2018

Gargi College, University of Delhi (*BA in Economics*)

Delhi, India, June 2016
